Portfolio: <https://steamdwarf.github.io/Portfolio/>

## Summary

---

Frontend and Blockchain (TON) Developer with 4+ years of experience building scalable, responsive web applications using React, TypeScript, and modern tools. Passionate about clean architecture, team collaboration, and continuous learning. Recently focused on blockchain integration using TON and smart contracts in Tact. Enjoy mentoring, exploring new technologies, and delivering functional user-centric solutions.

## Skills

---

**Languages & Markup:** HTML5, CSS3, Scss/Sass, JavaScript, TypeScript, Python, C#

**Frameworks & Libraries:** React, React Router, Redux Toolkit, Redux Toolkit Query, Socket.io, Express, Node.js, Ant Design, Bootstrap, Amcharts5, Dayjs

**Blockchain:** TON Blockchain, Tact, TON Connect

**DevOps & Tools:** Git, Docker, Webpack, Gulp

**Databases:** MongoDB, MySQL

**Other:** Unity, NumPy, Pandas, PyTorch, scikit-learn

**OS:** Linux, Windows

## Work experience

---

### PAVALI TECHNOLOGY, FrontEnd and Blockchain Developer

April 2024 – Present (1 year, 3 monthes)

Responsibilities:

- User registration and authorization
- Designed responsive frontend using React, Redux, React Router and Ant Design
- Working with REST API
- Connecting to payment system Cryptomus
- App update notification
- Blockchain contracts developing

### CODDY international programming school for children, Teacher

September 2022 – April 2025 (2 years, 8 monthes)

Responsibilities:

- Teaching web development, Unity, Python programming
- Developing neural networks
- Led project-based lessons

- Created learning materials
- Supported students outside of class.

## **Freelance**

Responsibilities:

- Developed responsive and cross-browser compatible user interfaces using HTML, CSS, and JavaScript
- Translated UI/UX design wireframes into pixel-perfect web layouts.
- Integrated RESTful APIs and handled asynchronous data loading.
- Maintained Git-based workflow and deployed applications via GitHub Pages or hosting platforms.
- Used Webpack/Vite for bundling and environment configuration.
- Adapted and extended CMS platforms (e.g., WordPress) using custom themes and plugins.

## **Projects**

---

### **FrontEnd Developer & Blockchain Developer, APIVPN**

Project name: APIVPN

Project description: Developed a decentralized VPN infrastructure on the TON blockchain, consisting of on-chain smart contracts and a web-based frontend application. The system enables node providers to stake and register servers for VPN deployment, while VPN providers manage their products, set monthly user limits (MAU), and handle subscription-based payments via Jetton tokens.

Key Features:

- Smart contracts for Node Providers with staking, server metadata (IP, geolocation, user limit), and usage control
- Smart contracts for VPN Providers with subscription, deposit, and MAU management logic
- Support for multiple VPN products per provider
- Full on-chain payment system using Jetton (TON fungible token standard)
- Web application for:
  - Users: discover and subscribe to VPN providers
  - VPN providers: manage offerings and publish product metadata
  - Node providers: register and stake infrastructure nodes

Tools & Technologies: Tact (TON smart contracts), Jetton, TON API, tonconnect, orbs-network, TypeScript, React, React Router, Ant Design, Blueprint, Sass, Vite, amCharts5, dayjs, react-markdown

Project Link: <https://app.apivpn.io/>

### **FrontEnd Developer, ASOPush**

Project name: ASOPush

Project description: Application for ASO Specialists. Developed internal web app for ASO specialists with user auth, payments, and dynamic UI. Implemented notifications, server time display, and secure registration flow.

Tools & Technologies: React, RTK, RTK Query, Ant Design, TypeScript, React Router, Vite

Project Link: [app.asopush.com/signin](http://app.asopush.com/signin)

### **FrontEnd Developer, Website for Eurasian technology platform**

Project name: Website for Eurasian technology platform

Project description: I have created theme for Wordpress according to the provided design

Tools & Technologies: HTML, CSS, Wordpress

Project link: <https://emplatform.ru/category/main/>

### **Backend Developer, Tavleya**

Project name: Tavleya

Project description: web application for draughts tournaments. I have created backend which allow draughts referees store information about players and tournaments, change player`s and tournament`s data, also run tournament`s draw.

Tools & Technologies: TypeScript, Express, Node.js, MongoDB

Source code link: <https://github.com/SteamDwarf/CheckersReferee>

### **Frontend Developer, Chatter**

Project name: Chatter

Project description: web chat on React with Socket.io library. In this project I learned how to raise the simple server on Express, how to work with library Socket.io on client and server side. Also learned how TypeScript works in conjunction with Express and React. Backend was deployed on Heroku, frontend deployed on Github Pages.

Tools & Technologies: HTML, CSS, React, TypeScript, Express, Socket.io, Heroku, Github Pages

Project link: <https://chatterapp-m21e.onrender.com>

Source code link: <https://github.com/SteamDwarf/Chatter>

### **FrontEnd Developer, Harry Potter Store**

Project name: Harry Potter Store

Project description: simple online store of goods from the Wizarding World. In this project I studied how to work with React, how to work with state using Redux ToolKit, how to send requests using RTK Query. Also studied how to perform user authentication.

Tools & Technologies: HTML, Sass, TypeScript, React, React Router, Redux ToolKit, Redux ToolKit Query, Github Pages

Project link: <https://steamdwarf.github.io/HPStore/>

Source code link: <https://github.com/SteamDwarf/HPStore>

### **FrontEnd Developer, CMS for shop**

Project name: CMS for shop

Project description: In this project, I created CMS to manage the goods of online store. I created ability to add a new product, change the product and delete it. Also, I created possibility to upload the image of the product to the server. For more comfortable control of UI, I created my own implementation of the observer pattern.

Tools & Technologies: HTML, CSS, JavaScript, Webpack, Github Pages

Project link: <https://steamdwarf.github.io/CMS-for-shop/>

Source code link: <https://github.com/SteamDwarf/CMS-for-shop>

### **FrontEnd Developer, Taskello**

Project name: Taskello

Project description: simple application, which allows to create and manage task board. In this project I learned how to use drag'n'drop, how to create DOM elements in realtime and learned functional programming principles.

Tools & Technologies: HTML, CSS, JavaScript, Webpack

Project link: <https://steamdwarf.github.io/Taskello/>

Source code link: <https://github.com/SteamDwarf/Taskello>

### **Frontend Developer, IRVAS glazing web-site**

Project name: IRVAS glazing web-site

Project description: in this project, I should add JS logic on finished site layout. In this project I learned how to work with DOM and how to break site logic on independent JS modules.

Tools & Technologies: JavaScript, Webpack, JSON-server

Project-link: [https://steamdwarf.github.io/JS-Project-webpack-babel-gulp-/](https://steamdwarf.github.io/JS-Project-webpack-babel-gulp/)

## Education

---

### Software Engineering

V.I. Vernadsky Crimean Federal University

Bachelor's degree

### Agronom

V.I. Vernadsky Crimean Federal University Structural unit Agro-Industrial College

Specialized secondary education.

## Sertifications

---

### Web Development Course — Innopolis University

(22.06.2023)

### Advanced Learning Algorithms — DeepLearning.AI & Stanford University

(14.03.2024)

### Supervised Machine Learning: Regression and Classification — DeepLearning.AI & Stanford University

(30.12.2023)

### CS50: Introduction to Computer Science — Harvard University

(07.09.2023)
